FLOQUAT™ P SERIES

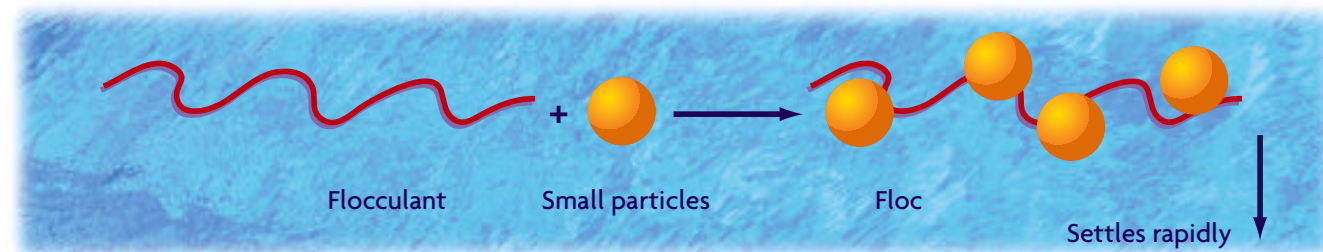

flocculants for swimming pools

FLOQUAT P Series

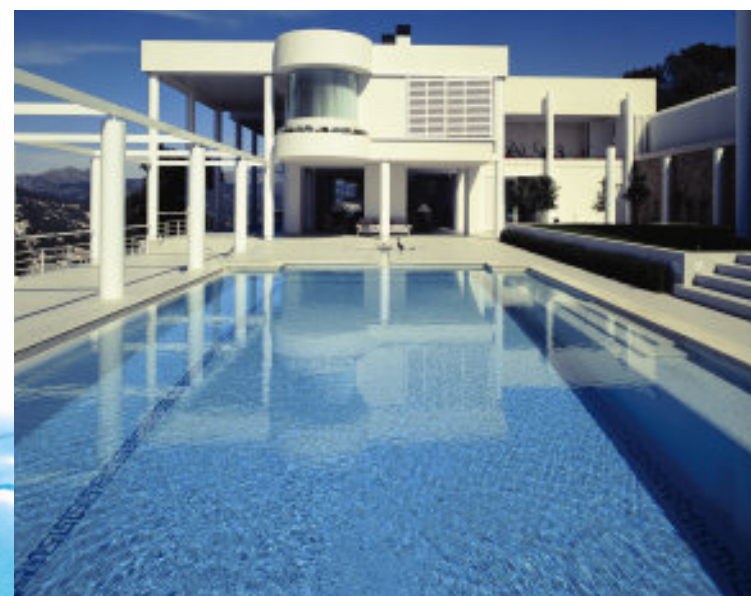

FLOQUAT P Series is a non alum range of flocculants that are highly effective at restoring water clarity in swimming pools. It removes cloudy conditions and haze by flocculating small particles and debris such as silica, dead algae and carbonates. These flocs then quickly drop to the bottom of the pool for easy vacuuming.

Flocs created on a heavily clouded water

Flocculation of small particles

FLOQUAT P Series

FLOQUAT P will work with all pool types, water sanitizing programs and filter types, it will not affect or be affected by chlorine and has no effect on pH.

Crystal clear water after
FLOQUAT P Series

Instructions for use :

1 The **FLOQUAT P** Series will work in all pH conditions, and works best with pH between 6.0 - 8.0

Continuous Treatment

2 Use at a rate of 1-4 oz. per 10,000 gallons for a continuous maintenance. (3-5 g/m³)

3 **FLOQUAT P** should be added in the skimmers with the recirculation on for a couple hours per day.

4 The flocs will then be removed through the filters during the normal filter cycle.

5 **FLOQUAT P** allows you to swim even during treatment.

Shock Treatment

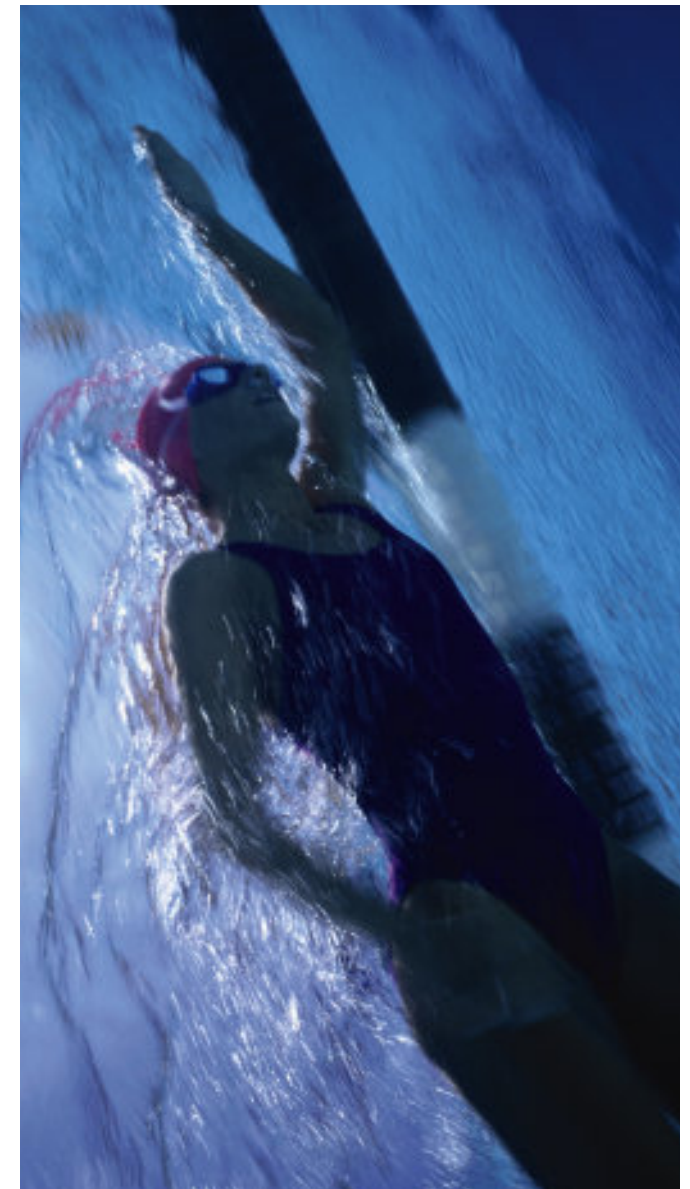

2 Use at a rate of 5-8 oz. per 10,000 gallons for shock treatment. (7-10 g/m³)

3 **FLOQUAT P** is simply poured in the pool. Let it settle overnight by switching off the recirculation pump.

Note: the greater the debris the faster the flocs settle. To speed up the settling time you may double or triple **FLOQUAT P** dosage, there is no risk of overdosing.

4 Finally vacuum to waste.

5 Backwash and clean filter and resume normal filter cycle.

Storage and disposal :

Keep **FLOQUAT P** in its original closed container when not in use. Store in a cool dry well ventilated area away from heat or open flame. Do not reuse container, but place in trash collection. Rinse thoroughly before discarding in trash.
